

Assembly Member Rebecca A. Seawright

is fighting for a healthy future for our community

The all-electric buildings law:

- ⚡ Requires most new buildings to be powered by electricity, instead of oil or gas, beginning in 2026
- ⚡ Reduces New York's dependency on methane-producing, planet-killing fossil fuels
- ⚡ Protects families from health problems caused by natural gas, while saving them money
- ⚡ Includes several commonsense exemptions, including waivers if the grid can't support a project
- ⚡ Doesn't affect current buildings' gas hookups or the ability to replace gas appliances
