You're invited to join:

Assemblyman Santabarbara & Cornell Cooperative Extension to learn about **LYME DISEASE PREVENTION**

Lyme disease is a bacterial infection transmitted by a tick bite that, if left untreated, can affect the heart, liver or central nervous system. The first symptoms often include a red “bull’s-eye” rash at the site of the bite, chills, fever, fatigue, headache and muscle pain.

Tips to minimize your risk:

- When in wooded or grassy areas, stay on well-traveled paths and avoid heavy vegetation.
- Wear light-colored long pants and a long sleeved shirt and tuck pants into socks and shirts into pants.
- Once indoors, do a thorough check of your clothes and your entire body, paying particular attention to the backs of knees, behind the ears, the scalp and back.
- Check your children and pets for attached or crawling ticks.

Assemblyman Angelo Santabarbara: **Questions? Need more information? I'm here to help.**
